Padlock & Bolt Kit

To improve the security of your tackroom door, Equine Security offers a unique Padlock & Bolt Kit, comprising a high security bolt, complete with fittings, and a circular padlock.

The bolt itself and the loops are case hardened, providing very high resistance to attacks from hacksaws or bolt cutters. The circular padlock has raised

shoulders and the body shape prevents gripping by wrenches.

If you need more than one Padlock & Bolt Kit, you may choose to have the padlocks all to the same key. We can supply padlocks to the same key at no extra cost.

Padlock & Chain Kit

To improve the security of your field gates, Equine Security offers a Padlock & Chain Kit, comprising a high security square link chain (11.5mm gauge) in either 1.2 metre or 1.5 metre lengths, complete with an armoured padlock.

The chain is manufactured from double case-hardened high tensile steel and has a fabric sleeve to prevent scuffing.

The padlock has raised shoulders to prevent bolt cutter attack.

If you need more than one Padlock & Chain Kit, you may choose to have your padlocks all to the same key. We can supply padlocks to the same key at no extra cost.

Equine Security

Equine Security is a wholly owned division of Sterling Security Products Ltd

Sterling Security Products has been at the forefront of bespoke safe design and manufacturing since 1986.

The first Saddle Safe was designed and built by Sterling Security Products in 2008 as a private commission. Others saw the finished product and wanted one for themselves, and it soon became clear that the Saddle Safe was providing a level of security that no other safe could achieve.

The following year it was decided to offer the product to the equestrian world at large and Equine Security was established to promote the new TackGuard. At the same time other security products were developed to protect tack room doors, stables and gates.

Keeping all your tack safe...

very safe.

Special features include:

- Two 7-lever security locks
- Fittings allow up to 4 saddles
- Ventilation top and bottom

TackGuard

The ultimate protection for your saddles.

Keep all your tack safe... very safe, with TackGuard.

Why do you need TackGuard?

For years saddles and riding equipment have attracted thieves. Exterior tack rooms offer little or no protection against determined villains. Saddles are difficult to trace and expensive to replace.

Now, Equine Security offers the revolutionary TackGuard - the ultimate solution to keep your valuable saddles safe.

Every TackGuard saddle safe is built to your individual requirements. You choose the number of saddles you want to store (up to four), bridle loops, a half-shelf for cleaning kit, etc. You can even order your TackGuard in a non standard colour, or even have the door hinged on the other side. The TackGuard is the most exacting, purpose built saddle safe available on the market today.

The saddle poles are fully adjustable for height and have a plastic end cap to prevent chafing.

The door is locked by two 7-lever security locks.

How much riding kit can I keep in my TackGuard?

Up to 4 saddles. Several bridles on the wall-mounted half-loops. A shelf to store your other gear. With an internal volume of almost 0.6 cubic metres you have plenty of room to store everything you need.

What about ventilation?

TackGuard has generous air vents fitted top and bottom on the front of the safe to allow proper air circulation.

Every TackGuard is built to your personal order. You can choose up to 4 saddle poles, an internal shelf, and bridle half-loops.

Colour options

TackGuards have a special spray finish using Hammerite paint and are painted in a pewter colour as standard. This gives an attractive, tough and long lasting finish. Other colours are available to special order at a small extra cost and the choices are shown below. Please note that the colour chart may vary slightly from the actual paint finish.

Ventilation is provided by two generous sized air vents at the top and bottom of the safe.

How does TackGuard protect my saddles?

A TackGuard is virtually a small strong room. It has a separate plinth which is first bolted to the floor. The main safe is then fitted over the plinth and bolted together. Now the TackGuard cannot be moved.

With a 5mm recessed steel door, double security locks and concealed hinges, the villain has nowhere to attack the safe.

I want to buy a TackGuard; what do I do next?

Your TackGuard will be made to your own specification. The basic unit measures 700 x 650 x 1350mm. From there, we will fit the number of saddle poles you require, bridle hoops or a shelf. The choice is yours. Please ring our design team or drop us an email. Or visit our website at:

A TackGuard normally takes about 3 weeks to build, and we arrange delivery to your premises.

Saddles are expensive to buy – and to replace. Unfortunately, they are also very easy to steal, and saddle theft has increased dramatically over the last few years.
